Summary

- Having 5+ years of experience in development and support of product-based applications across various domains using Ruby on Rails and BackboneJS.
- Proficiency at splitting things into smaller manageable pieces, setting priorities, working under short deadlines and ability to handle multiple projects/tasks concurrently.
- A person who enjoys customizing the entire development environment.

Experience

Team Lead at Sell.do --- **April, 2018 to Present**

Senior Software Engineer at Sell.do ------------------------------------- **Feb, 2016 to March, 2018**

- Worked on Sell.do - India's leading sales & marketing automation platform for the real estate business.

- Taking care of bug-fixes & enhancements of following modules as a Team Lead -
  - Post-Sales (Provide a way to handle all the processes in post-booking phase easily)
  - CustomJS (Custom UI modifications as per client need)
  - Workflow (Condition-action branching structure same as Github Workflows)
  - Channel Partner Management

- Implemented following features in post-sales module since last 3 year -
  - Automated Demand letter Generation
  - Receipt Generation
  - Cost Calculator Service
  - Interest Calculator Service
  - Schemes & Price Quotes Implementation
  - TAX & TDS Calculation
  - Follow rubocop & yardgen for each feature developed
  - Created user stories & technical documentation for each feature developed

- Migrated CustomJS for around 50 clients to version 2 which is released in May-2018.

- Created following scripts
  - Importing entire inventory for a new client
  - Old data migration (Bookings, Receipts, Applicants)
  - Script for creating a dummy data on staging from the backend for whole single client
  - Script for Integration testing for entire Post Sales module using Rspec

- Moved multiple UI screens to ERB Templates so that we can display UI as per the need.

- Worked on fixing a number of bugs & enhancements in existing workflow.

Software Engineer at Bacnacy Technologies ------------------------------ **May, 2015 to Jan, 2016**

- Worked on GQS application for Alpine Electronics Inc., which is used to check the quality of the product being developed and repaired.
- Worked on several bug fixes and enhancements for next beta release of their web application, which is developed in Ruby on Rails & BackboneJS.
- Worked on this application alone for 8 months from requirement gathering for each feature from client to estimations, development, client communication, etc.

Programmer at BoTree Technologies Pvt. Ltd. -------------------------- **June, 2014 to April, 2015**

- Worked on Velocity application for Mobiquity Inc., which is a content management system that allows you to integrate all your content like quizzes, presentations, certifications, videos, games, sales aids etc into your own apps.
- Worked on a number of bug fixes and enhancements, API development for version 5.
